

TALK'NPICK - NEW EFFICIENCY IN WAREHOUSE PICKING AND INVENTORY

With the most efficient and accurate solution on the market, you can handle inventory reception, put-away, picking and inventory. Easy and quick deployment allows up to a few months of pay-back time for your investment! Arm-wearable solution is learned to use in an hour and it is suitable for almost all warehouse tasks regardless of the industry - from receiving incoming goods to internal transfers.

Smartphone is the basis of Talk'nPick solution

The core of the Talk'nPick solution is software that is downloaded to your Android smartphone. All sounds and speech are transmitted via wireless headset and data can be read by using finger scanner or similar. Wearable system is designed for mobile work with technical sleeve for wearing smartphone in users' arm. Accessories are available, e.g. RFID readers and portable printers.

The solution is used multimodally with a combination of speech, touch screen and finger (or other type of) scanner. According to the studies, it is shown that this multimodal picking technology is the fastest and most accurate method for warehouses of almost any size. The solution works on a wireless Wi-Fi or public mobile network to avoid the cost of building and maintaining your own internal network.

Superior easy to use

Talk'nPick pays particular attention to the needs of users. The ease is already visible in the deployment phase, as the work becomes more efficient starting even from the first hours. Freeing user's hands and eyes into the actual work and superior ergonomics improve the sense of work. Talk'nPick has received 100% recommendation from our users! Talk'nPick can be integrated to the

client's system in several ways. The fastest and easiest option is the voice picking interface found in many ERP and Warehouse management systems. The decision on integration is always made based on the customer's needs and the system in place.

Boosts operations by up to over 40%

Talk'nPick improves the efficiency of internal logistics operations, saving up to 40% of working time. At the same time, it reduces the number of errors in picking up to 80%. Superior usability also enables the rapid use of temporary workforce. Help in your warehouse comes quickly if needed, as the solution is at its best available one month after the order!

Warehouse management at the new cost level

With multi-customer batch picking and other warehouse management features, Talk'nPick also improves warehouse management in many new ways. It helps you to streamline your operations without heavy updates or investing in complex and affordable inventory management software.

” **Efficiency increased by almost 40% already in the first month. As an user, I can warmly recommend the introduction of Devoca's solution.** Logistics Manager Jyrki Ristinen, Oy Medifon Ab.

TALK'NPICK-customers

Medifon Oy Ab was founded in 1981, wholesale of pharmacy equipment as well as distributor. In the high growth pressure, the Medifon wanted to enhance the efficiency of internal logistics operations for receipt, picking, and counting. The deployment of the solution achieved almost 40 % of the increased efficiency in picking and responded to the challenges of rapid growth. Now there are over 50 employees using TalknPick in picking, put-away and inventory.

LTP Logistics Oy is a temperature control (+0°C to +3°C) food logistics service provider. Its customer base consists of small and medium-sized food industry operators. Talk'nPick was used to remove sticker based picking and at the same time freeing pickers hands to actual work. Additional efficiency was obtained through multi-customer picking, where multiple customer orders are picked in the same time.

Tampereen Autovaraosa Oy, TAVO, is an import, wholesale and retail company for heavy equipment spare parts. The wide range includes heavy equipment spare parts, accessories for a wide range of car brands.

A new, modern, efficient and accurate solution was needed to replace paper-based picking. Talk'nPick solution helped TAVO to improve warehouse operations faster and more efficient, and to prepare for the tightening service requirements of customers.
